Under the authority of the *Pest Control Products Act*, Health Canada's Pest Management Regulatory Agency (PMRA) has added new uses on dry common beans to the product label of Frontier Herbicide, containing technical grade dimethenamid. The specific uses approved in Canada are detailed on the label of Frontier Herbicide, *Pest Control Products Act* Registration Number 23462.

Corresponding maximum residue limits (MRL) were proposed for dry common beans without existing MRLs in the consultation document published on 21 November 2008, Proposed Maximum Residue Limit PMRL2008-36, *Dimethenamid*. The PMRA received no comments in response to this consultation.

To comply with Canada's international trade obligations, consultation on the proposed MRLs was also conducted internationally by notifying the World Trade Organization, as coordinated by the Standards Council of Canada. No comments were received as a result of the World Trade Organization consultation.

The following MRLs are legally in effect as of the publication date of this document and are in addition to the MRLs already established for dimethenamid.

Established Maximum Residue Limit for Dimethenamid

Common Name	Residue Definition	MRL (ppm)	Food Commodity*
Dimethenamid	2-chloro-*N*-(2,4-dimethyl-3-thienyl)-*N*-(2-methoxy-1-methylethyl)acetamide	0.02	Dry adzuki beans, dry beans, dry blackeyed peas, dry broad beans, dry catjang seed, dry chickpeas, dry guar seed, dry lablab beans, dry lentils, dry lima beans, dry moth beans, dry mung beans, dry navy beans, dry pink beans, dry pinto beans, dry rice beans, dry southern peas, dry tepary beans, dry urd beans, grain lupin

* The listed dry beans do not include kidney, otebo or white beans for which an MRL of 0.02 ppm is already established.

A complete list of all MRLs established in Canada can be found on the PMRA's MRL webpage.
